# ethos

SMARTER DECISIONS. FASTER ACTION. BETTER PATIENT OUTCOMES.

Ethos equips physicians with real-time **predictive analytics** to support **faster** clinical **decisions**, **earlier intervention**, and **better outcomes** for patients at risk of alcohol-related liver disease.

Alcohol misuse is the **#1 preventable** driver of **liver disease** progression- yet early risk factors are often missed in clinical workflows.
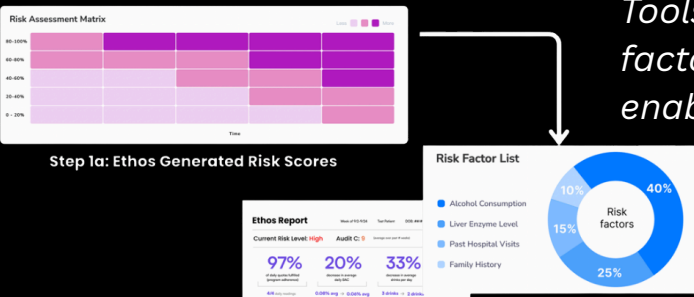

28 million Americans meet criteria for AUD- but only **1 in 28** receives a diagnosis and care.

Ethos helps you identify hidden risk earlier, so you can deliver the right care before it's too late.

Clinician-First. Evidence-Based. Outcome-Focused.
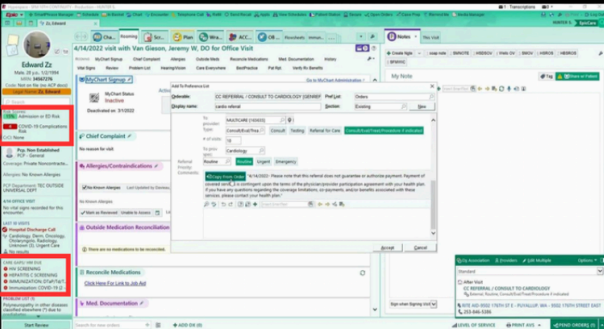

STEP 1:
Early Identification Risk Stratification

Step 1a: Ethos Generated Risk Scores

Tools to identify heavy alcohol use risk factors and psychiatric comorbidities, enabling earlier, smarter intervention.

STEP 2:
Care Coordination Navigation

Seamless EHR integration gives you the actionable insights needed to efficiently triage patients into the right care pathways, when timing matters most.

STEP 3:
Real Time Monitoring & Care Delivery

Continuous, remote patient monitoring allows for early detection of concerning behavior patterns and delivers timely alerts, so you can intervene before relapse occurs.

Your Need	We Deliver
Make faster, more informed clinical decisions	Real-time risk scores and decision support at the point of care
Reduce time spent triaging complex cases	Predictive modeling with automated risk stratification
Avoid unnecessary admissions or delays in specialty care	Early alerts for high-risk behaviors before escalation
Deliver personalized care across diverse patient populations	Longitudinal insights and comorbidity risk detection

REDUCING DELAYS, IMPROVING ACCURACY, AND SUPPORTING SMARTER CARE THROUGH EARLY IDENTIFICATION.
